## AGRICULTURAL SAFETY TOPICS

### TRACTORS & SELF-PROPELLED FARM EQUIPMENT

#### Objective:

To be able to safely operate tractors and other self-propelled farm equipment.

#### Background:

Read and follow the equipment operations and safety manuals. Keep safety signs in good repair and replace them as needed. When replacing a part, be sure to transfer the safety equipment to the new part. Replacement safety signs are available from the dealer.

Knowing how to use and operate all controls on each piece of machinery is the first step towards hazard free operation. Keep the machines in proper working condition. Do not modify equipment. Unauthorized modifications impair the function, safety and affect machine life.

Tractors are large, heavy and powerful machines which require careful attention to operate and service. New tractors are equipped with safety devices to provide a reasonable amount of protection. Practice good safety habits and be aware of hazardous situations.

#### Safe Operation of Farm Equipment:

- Safe operation depends on alert, efficient handling. Accidents may occur when the operator is tired or not alert.
- Limit use of equipment to those qualified to operate the equipment.
- Wear safety glasses to prevent eye damage due to flying debris. Wear snug fitting clothing to decrease the chance of catching something on a moving part.
- No riders on farm equipment.
- Prior to working in a field, check the field for debris, obstacles, ditches and holes that could cause the tractor to overturn.
- Adjust operating procedures to environmental conditions. Control is more difficult in mud, snow or ice.

---

## AGRICULTURAL SAFETY TOPICS – TRACTORS & SELF-PROPELLED FARM EQUIPMENT

- For protection from an overturn, the tractor should be equipped with a rollover protective structure (ROPS). Fasten the seat belt only if there is a ROPS. (Refer to Rollover Protective Structures)
- A first aid kit should be on or near all major equipment.

Use adequate ballast for stability when operating machines with mounted equipment. Hitching loads to the draw bar prevents turning over backwards. Back out of deep ditches, up slopes and out of mud holes, to avoid overturning. Slow down and begin turning the wheels before applying the brake to assist in turning. This helps avoid overturns, skidding and bouncing. Sitting down, when travelling over rough terrain, lessens the chance that the driver could be thrown from the implement.

### Review The Following Points:

- Stay alert.
- No riders (except during training session).
- First aid should be readily available.
- Follow recommended procedures in different terrains and weather conditions.
- Read and follow operators manual and safety precautions.
