OVERVIEW

During the COVID-19 (coronavirus) outbreak, we all need to do our part to keep workers, customers and the public safe and healthy so we can stop the spread and prepare to reopen the province, when we are ready.

Below is a set of resources, tips and best practices to help employers and employees prevent the spread of COVID-19 and work together to reopen the province.

Employers and workers in Ontario have certain duties and rights under the Occupational Health and Safety Act (OHSA) and its regulations. Employers should also review and follow any applicable directives and guidance coming from the Chief Medical Officer of Health and Ministry of Health.

- Duties of Employers and Other Persons

BEST PRACTICES

We know that every workplace is unique which makes it so important that every workplace assess functions carried out by their workforce to ensure they take action to protect against the hazards presented by exposure to COVID-19.

Practicing physical distancing (staying 2 metres away from others), minimizing contact with droplets of mucous or saliva, keeping hands, surfaces and objects clean, and preventing contact with potentially infected people are all critically important measures. Other information on how you can protect yourself is available on ontario.ca/coronavirus.

We have provided some recommendations below for your consideration. Please keep in mind that introducing any new protective measures should be done as part of a full review of other workplace hazards – not just COVID-19. Employers should consult with Joint Health and Safety Committees/Health and Safety Representatives on measures to protect workers in the workplace.

Some workplaces may already have some existing controls in place that may help reduce the risk of exposure to workers, so regular ‘check-ins’ on the effectiveness of controls is highly recommended.

RECOGNIZE HAZARDS AND ASSESS RISK

For funeral workers, we recognize that you will have contact with the public and surfaces, such as equipment, clothing, products and remains, as you go about your work. You could potentially come in contact with droplets as a result of these interactions. COVID-19 can travel in respiratory droplets that are released into the environment by coughing or sneezing.

Take a look at where you might minimize those risks within your workplace. Consult public health information to learn the symptoms of COVID-19 infection. Recognize and report these hazards and use appropriate controls. Ensure that you or your co-workers stay home if you or they have symptoms.

We understand – so it’s important to take a look at where you can possibly minimize those risks within your workplace. Take a look at the controls below to see how they may assist you.
CONTROLS
Already existing controls may help to reduce the risk of exposure to workers (e.g. following practices required by the Local/Provincial Health Unit).

To protect yourself from some of these hazards consider the following options:

- Are there tasks you can minimize or eliminate? For example, can transactions be done by e-transfer or online? Can you postpone visitations? Eliminate stylist activities?
- Is it possible to control how many people you’re interacting with? Physical distancing (staying 2 metres apart) is recommended, so if you can enforce distance between people, it’s recommended to do so.
- Consider limiting visitations to essential people only and spacing out chairs or use tape to mark proper distance between persons, flow of people, or limiting numbers of people admitted to only a few at a time.
- Reduce the number of in-person contacts. Eliminate contact greetings such as handshakes and hugs.
- Minimize or eliminate practices by staff and visitors that require physical contact with the deceased.
- Increase the cleaning frequency – on everything from common areas, door handles, switches, tools, furniture and equipment. Be sure to follow safe practices and use an appropriate cleaning agent.
- Consider setting a practice like washing hands and disinfecting surfaces and tools after each interaction.
- Consider job rotation to reduce time in a specific work area and/or to limit workers working too close together in a space.
- Suspend all non-essential services and implement effective sanitation practices between rotations.
- Be sure to keep up with good hand washing and avoid touching your face. Extra handwashing is a good idea for everyone – and when that’s not possible, a good hand sanitizer should be used frequently.
- Place sanitizer throughout your facility and ask visitors to use it prior to entering the facility and each room and upon exiting. Provide receptacles for disposal of tissues and other waste.
- Keep up with the latest. Consider regular times to check in with public health updates and retrain/revise practices as needed.
- Ensure that measures you decide on are communicated to workers.

OTHER CONTROL MEASURES

- Implement all measures to ensure physical distance and separation between people.
- Where appropriate, safely work/meet in outdoor spaces. Where appropriate, safely ventilate spaces by opening doors.

In addition to the above recommendations, your workplace should consider protective equipment as part of a complete hazard assessment. Equipment is only effective if people understand its limitations and wear it correctly. Workers need to be trained in the fit, use, storage, cleaning, maintenance and limitations of the protective equipment that they wear. Workers must use protective equipment as required by their employer.

If physical distance and separation cannot be maintained, workers should have protective equipment consisting of surgical/procedure mask and eye protection (goggles or face shield).

EVALUATE

COVID-19 has presented challenges workplaces have never encountered before. Keep in mind that any adjustments made today may need readjusting tomorrow. Look at preventative measures on an ongoing basis, and adjust them if they are not working well enough or causing other issues. For example, are people doing what they’ve been asked to do? If not, what is preventing them from doing so? Can you make adjustments and improve?

For anyone who thinks they may have been exposed to or are experiencing symptoms of COVID-19, please start by visiting the Ministry of Health and Long-Term Care website and taking a self-assessment. Please do not visit an assessment centre unless you have been referred by a health care professional. Do not call 911 unless it is an emergency.

For additional information, refer to Health Canada’s website on COVID-19.
RESOURCES

Stay updated with daily government updates:

- Government of Ontario
- Government of Canada
- Public Health Ontario

Ontario government and agency-issued resources about COVID-19

The Ontario Ministry of Health is providing consistent updates on the provincial government’s response to the outbreak, including:

- status of cases in Ontario
- current affected areas
- symptoms and treatments
- how to protect yourself and self-isolate
- updated Ontario news on the virus

Public Health Ontario is providing up-to-date resources on COVID-19, including:

- links to evolving public health guidelines, position statements and situational updates
- synopsis of key articles updating on the latest findings related to the virus
- recommendations for use of personal protective equipment
- information on infection prevention and control
- testing information
- other public resources

The Ontario government is supporting employers by setting up a portal to assist them in finding supplies and equipment through the Workplace PPE Supplier Directory.

OTHER COVID-19 RESOURCES

Health Canada outlines the actions being taken by the Government of Canada to limit spread of the virus, as well as what is happening in provinces and communities across the country. It also maintains a live update of the number of cases by province.

The World Health Organization is updating the latest guidance and information related to the global outbreak and spread beyond Canadian borders.

It also provides the most up-to-date information on:

- current research and development around the virus
- a COVID-19 situation “dashboard”
- emergency preparedness measures
- live media updates on the spread of the virus

This resource does not replace the Occupational Health and Safety Act (OHSA) and its regulations, and should not be used as or considered legal advice. Health and safety inspectors apply the law based on the facts in the workplace.
