

# Do you know your chemical safety symbols?

Follow the path from each danger symbol to the correct container below.

## HOW TO STAY SAFE AROUND DANGEROUS CHEMICALS

**STOP:** Look for a danger symbol on the container. Is it stored safely? What could go wrong if the chemical spills or gets on someone?

**THINK:** Are you allowed to use this chemical without an adult around? If yes, have you been trained how to use it safely? Do you have the right protective equipment? (e.g., gloves, mask)?

**ACT:** If you've been shown how, use the chemical with care. If not, ask an adult, or **stay away to stay safe.**
